Glass fiber paint stop media from G2 up to G4 efficiency grade

SIFA's flexibility enables a world-wide approach, thanks to the wide range of products and solutions that SIFA offers in order to satisfy customers' needs.

Glass fiber paint stop media is mainly used for the separation of the solid part of the Overspray in painting chambers.

It is designed to prevent overspray from paint spraying extract systems to eliminate contamination of equipment, spoiling of painted surfaces and protection of the environment.

Within this environment, SIFA's paint stop has a wide variety of applications such as: filtration of exhaust air from areas of spray painting in which liquid coating sprays are used; post-filtration in water systems of Overspray-abatement; post-filtration in inertial systems of Overspray-abatement (pleated, boxes, etc.).

SIFA'S glass fibre paint stop media has good resistance to temperature (operating temperature 80 °C) and high capacity of dust accumulation.

SIFA's glass fibre paint stop media is available in rolls at different thickness and basis weight.
