

SIFA Technology Srl, a specialized company operating in the fields of filtration, thermal insulation, AGM battery separators, and the manufacturing of lightweight metalwork products, has implemented a Quality Management System to ensure the quality of its products, meeting customer expectations and strengthening its reputation in the industry.

In addition to this primary goal, the Quality Management System aims to:

1. elevate the culture of quality among the organization's employees, engaging them in understanding the importance of their work;
2. define the actions needed to manage identified business risks;
3. promote improvement plans to consistently satisfy all stakeholders;
4. prevent, reduce, and/or eliminate non-conformities, which cause waste and defects that result in additional costs and potential harm to customers;
5. continuously improve the product/service provided in line with market demands through marketing surveys and customer meetings;
6. constantly adapt the company's production capacity and flexibility to maintain high product competitiveness and optimal value for money;
7. comply with all applicable laws for the sector in which the company operates;
8. engage and communicate the Quality Policy throughout the organization at all levels through periodic meetings;
9. define and achieve measurable objectives to evaluate the effectiveness of the Quality Management System.

To this end, and subject to compliance with applicable laws, technical and contractual regulations, and product and worker safety standards, the Company has decided to establish and maintain a Quality Management program for planning and monitoring all company activities. Responsibility for establishing, implementing, and maintaining the Quality Management System lies with all process owners, who actively collaborate with the Quality Manager to effectively pursue the commitments undertaken above.
